

## Master's Programme in Architecture

- Programme code: TAMAR
- Scope: 120 credits
- Cycle: Second
- Approved by: Programme Board A
- Validity: 2022/2023
- Date of approval: 10 February 2022

In addition to the syllabus, general regulations and information for the Faculty of Engineering apply to this programme.

### 1 Aim and outcomes

#### 1.1 Aim

Architecture deals with the quality of the space people create for their lives. How these environments are designed and developed constitute the central focus area. Building these spatial contexts with long term sustainable properties is a goal in itself.

The education aims to provide the student with:

- Artistic and technical high-quality knowledge of spatial design, with the physical constructed reality as intention,
- Ability and insights concerning innovation and new thinking,
- Insights into the architect's different work areas and their relationship to society,
- An empirical and scientific basis for creative and critical approach to the profession, architecture and society.

The programme combines an explicit international orientation with a firm foundation in the local context.

## **1.2 Outcomes for a Degree of Master of Science (120 credits)**

(Higher Education Ordinance 1993:100)

### **Knowledge and understanding**

For a Degree of Master of Science (120 credits) the student shall

- demonstrate knowledge and understanding in the main field of study, including both broad knowledge of the field and a considerable degree of specialised knowledge in certain areas of the field as well as insight into current research and development work, and
- demonstrate specialised methodological knowledge in the main field of study.

### **Competence and skills**

For a Degree of Master of Science (120 credits) the student shall

- demonstrate the ability to critically and systematically integrate knowledge and analyse, assess and deal with complex phenomena, issues and situations even with limited information,
- demonstrate the ability to identify and formulate issues critically, autonomously and creatively as well as to plan and, using appropriate methods, undertake advanced tasks within predetermined time frames and so contribute to the formation of knowledge as well as the ability to evaluate this work,
- demonstrate the ability in speech and writing both nationally and internationally to report clearly and discuss his or her conclusions and the knowledge and arguments on which they are based in dialogue with different audiences, and
- demonstrate the skills required for participation in research and development work or autonomous employment in some other qualified capacity.

### **Judgement and approach**

For a Degree of Master of Science (120 credits) the student shall

- demonstrate the ability to make assessments in the main field of study informed by relevant disciplinary, social and ethical issues and also to demonstrate awareness of ethical aspects of research and development work,
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning.

### **1.3 Specific outcomes for a Degree of Master of Science in Architecture**

In combination with an approved bachelor's degree in architecture, the Master Programme shall fulfil the goals specified in the EU directive 85/384/EEG. According to the directive, the education shall contain a balance between the theoretical and practical aspects of architectural design and assure the following skills:

- capacity for architectural design - artistic, aesthetic, and technical,
- sufficient knowledge in the theory and history of architecture, in the architecture related arts, and in engineering and humanities,
- awareness of the significance of the fine arts for architectural design,
- sufficient knowledge in urban design and planning, as well as planning process,
- understanding of the interaction between humans and buildings and between buildings and their context, as well as the necessity to relate buildings and spatial organisation to human needs and scales,
- understanding of the architectural profession and the role of architects in society,
- knowledge of investigative methods and preparatory work for design tasks, which always include social and cultural implications,

- knowledge of building constructions and technology,
- sufficient knowledge of the physical conditions and the technology which affects the building's technical design, comfort and climate shell,
- sufficient design ability to meet the users' needs within the frames given by budget and regulation, and
- sufficient knowledge of the building processes, organisations, regulations, and methods which affect the delivery of the architectural project and its inclusion in the overall planning.

### **1.4 Further studies**

On completion of the second-cycle degree, students have basic eligibility for third-cycle studies.

## **2 Programme structure**

The Master's Programme is built up from existing courses at the advanced level of the Architecture programme.

Each semester includes a design studio project of 15 credits, a connected design theory course of 7.5 credits and an elective course of 7.5 credits. One of the elective courses must be chosen from the pre-research profiled/labelled courses.

### **2.1 Courses**

The courses included in the programme are indicated in the timetable.

## **3 Specific admission requirements**

### **3.1 Admission requirements**

A Bachelor's degree of architecture. A digital portfolio of the applicant's own work in the field that clearly proves that the applicant has good potential to benefit from the programme. English 6.

## **4 Degree**

### **4.1 Degree requirements**

For a Degree of Master of Science (120 credits) students must successfully complete courses comprising 120 credits, including a degree project worth 30 credits. 90 credits must be second-cycle credits and 60 credits of those must be in the main field of study, including the degree project. At least one of the elective courses AFON25 Performing Theories or AFON30 Architecture as Temporal Landscapes must be included.

#### **4.1.1 Degree project**

The student may commence work on the degree project when at least 76 credits of courses can be included in the degree. The degree projects included in the programme are listed in the timetable.

### **4.2 Transitional provisions**

A student who applied for and was admitted to the programme in the autumn semester of 2021 is entitled to study the courses that are part of the specialisations in Spatial Experiments and Advanced Architectural Design. The student is also entitled to obtain a master's degree in Architecture with a specialisation in Spatial Experiments or a master's degree with a specialisation in Advanced Architectural Design on the same condition as if both specialisations remained, once all degree requirements have been completed.

### **4.3 Degree and degree certificate**

When students have completed all the degree requirements, they are entitled to apply for certificate for a Degree of Master of Science (120 credits) in Architecture. Main Field of Study: Architecture with specialisation in Advanced Architectural Design.

## **5 Special regulations**

### **5.1 Semester structure**

The Master's programme in Architecture is not divided into study periods. This means that teaching is scheduled throughout the semesters.

### **5.2 Field exercises**

The teaching includes study trips, inventories, surveying, environmental studies etc. as an integral part of the training.

### **5.3 Portfolio**

The students are to collect their blueprints and other materials in a portfolio dedicated to the purpose that is to be available for assessment.
