

LUND
UNIVERSITY

Faculty of Engineering, LTH

General syllabus for third-cycle studies in Innovation Engineering TEIDEF02

The syllabus was approved by the Board of the Faculty of Engineering/LTH 19 May 2010 and most recently amended 15 December 2014 (reg. No U 2014/717).

1. Subject description

Innovation Engineering research deals with both technological and social innovations and includes the design and development of new products (goods and services) and new processes (technological and organisational). A key focus is on the cross-functional interaction between individuals, groups and organisations spanning the whole innovation process from idea to commercialisation. The aim of the research is to strengthen the innovative ability of individuals and groups, in different types of organisation and collaboration, through increased knowledge, development and application of methods, tools and strategies in the innovation process.

The expected outcomes of increased innovative ability are increased growth, employment and competitiveness. The research issues are approached with theories and methods from many different disciplines, mainly from engineering and the social sciences.

2. Objective of third-cycle studies at LTH

The Board of LTH established the following objective for third-cycle studies on 15 February 2007.

The overall objective of third-cycle studies at LTH is to contribute to social development and prosperity by meeting the needs of business and industry, academia and wider society for staff with third-cycle qualifications. LTH shall primarily provide education leading to a PhD or licentiate in the fields of LTH's professional degrees. The programmes are first and foremost intended for the further training of engineers and architects. The programmes are designed to encourage personal development and the individual's unique qualities.

Third-cycle graduates from LTH shall demonstrate:

- proficiency in research theories and methods and in a critical, scientific approach
- both breadth and depth of knowledge within the subject of his or her third-cycle studies

The programmes aim to develop:

- creativity and independence with the ability to formulate advanced research issues, solve problems and plan, carry out and evaluate projects within a set time frame
- openness to change
- personal networks, both national and international
- social skills and communication skills
- teaching ability
- innovation skills, leadership and entrepreneurship

In order to enable students to achieve these skills and abilities, LTH provides:

- high-quality supervision and good conditions for study in a creative environment
- a good balance between basic and applied research, with openness to wider society
- a range of advanced third-cycle courses at both departmental and faculty level
- a good balance between courses and thesis work
- opportunities to present research findings at national and international conferences and in internationally recognised journals, or by another equivalent method which leads to wide exposure and circulation
- opportunities to spend time in international research environments for short or extended periods

3. Learning outcomes for third-cycle studies

The learning outcomes for third-cycle studies are given in the Higher Education Ordinance.

3.1 Licentiate

Knowledge and understanding

For a Licentiate the third-cycle student shall:

- demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular

Competence and skills

For a Licentiate the third-cycle student shall:

- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work
- demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general
- demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity.

Judgement and approach

For a Licentiate the third-cycle student shall:

- demonstrate the ability to make assessments of ethical aspects of his or her own research
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning

3.2 Doctor of Philosophy

Knowledge and understanding

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate broad knowledge and systematic understanding of the research field as well as advanced and up-to-date specialised knowledge in a limited area of this field
- demonstrate familiarity with research methodology in general and the methods of the specific field of research in particular

Competence and skills

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate the capacity for scholarly analysis and synthesis as well to review and assess new and complex phenomena, issues and situations autonomously and critically
- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake research and other qualified tasks within predetermined time frames and to review and evaluate such work
- demonstrate through a thesis the ability to make a significant contribution to the formation of knowledge through his or her own research
- demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
- demonstrate the ability to identify the need for further knowledge
- demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity

Judgement and approach

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics
- demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used

4. General and specific admission requirements

A person meets the general admission requirements for third-cycle courses and study programmes if he or she:

1. has been awarded a second-cycle qualification, or
2. has satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second cycle, or
3. has acquired substantially equivalent knowledge in some other way in Sweden or abroad.

The higher education institution may permit an exemption from the general entry requirements for an individual applicant, if there are special grounds. Ordinance (2010:1064).

A person meets the specific admission requirements if he or she has:

1. at least 50 credits in subjects of relevance to the field, including at least 25 second-cycle credits,
or
2. an MSc in Engineering, or one- or two-year Master's degree of relevance to the field.

Finally, the student must be judged to have the potential to complete the programme.

Exemptions from the admission requirements may be granted by the Board of LTH.

5. Selection

Selection for third-cycle studies is based on the student's potential to profit from such studies.

The assessment of potential in accordance with the first paragraph is made primarily on the basis of academic results from the first and second cycle. Special attention is paid to the following:

1. Knowledge and skills relevant to the thesis project and the subject of study. These may be demonstrated through documents appended to the application and at a possible interview.
2. An assessment of ability to work independently and to formulate and tackle research problems. The assessment could be made on the basis of the student's degree project and a discussion of this at a possible interview.
3. Written and oral communication skills
4. Other experience relevant to the third-cycle studies, e.g. professional experience

6. Degree requirements

Third-cycle studies lead to a PhD or, if the student wishes or if it has been specified in the decision on admission, to a licentiate. The student also has the right to complete a licentiate as a stage in his or her third-cycle studies, but is not obliged to do so.

The requirements for a licentiate are:

- passed courses of at least 50 credits, and
- a passed thesis of a scope corresponding to studies of at least 70 credits

The thesis and courses shall comprise at least 120 credits in total.

The requirements for a PhD are:

- passed courses of at least 80 credits, and
- a passed thesis of a scope corresponding to studies of at least 160 credits

The thesis and courses shall comprise at least 240 credits in total.

6.1 Degrees awarded

The programme can lead to the following degrees:

Teknologie licentiatexamen/Licentiate in Engineering

Teknologie doktorsexamen/Doctor of Philosophy in Engineering

or:

Filosofie licentiatexamen/Licentiate of Philosophy

Filosofie doktorsexamen/Doctor of Philosophy

7. Course component

The programme is to include courses. For each course, an examiner shall be appointed at the department that delivers the course. The examiner shall draw up a written syllabus which states the course title in Swedish and English, the learning outcomes of the course, the course content and the number of credits.

The individual study plan is to include details of which courses the individual student shall or may include in his or her studies and how many credits for each course may be included in the degree. Courses taken at other faculties or higher education institutions may also be included in the study plan.

The following guidelines apply to the course component of the programme.

The course component is divided into the following four blocks:

1. Research methods and the theory of science. The course “Introduction to research studies in Innovation Engineering at the Department of Design Sciences” (4 credits) is compulsory.
2. Specialisation in Innovation Engineering, including innovation theory, innovation of goods and services, innovation processes and innovation organisation. The course “Introduction to Innovation Engineering” (7.5 credits) is compulsory.
3. Specialisation in the field of the thesis project
4. Broadening

For both licentiate and doctoral degrees, the first block must comprise 15 credits and the second block 30 credits. Courses in block 4 are to be selected to contribute to achieving the learning outcomes of the programme.

8. Thesis

The programme shall include a research project documented in a licentiate or a doctoral thesis.

The research student is to work close to a senior researcher, especially during the first year.

Prior to obtaining the doctoral degree, the research student is to have participated actively in no fewer than two international academic conferences.

8.1 Licentiate thesis

The licentiate thesis can be presented either as a monograph or as a compilation thesis. Compilation theses must include at least two peer reviewed, published or publishable research reports/papers in addition to a summarising introduction. The thesis is to be reviewed at a public seminar including an external moderator. It is awarded one of the grades Pass or Fail by an examiner.

8.2 PhD thesis

The PhD thesis can be presented either as a monograph or as a compilation thesis. Compilation theses must include at least four peer reviewed, published or publishable research articles or conference papers of relevance and sufficient quality for the research field. The thesis is to be publicly defended. The relevant research programmes board appoints a grading committee, external reviewer and chair for the public thesis defence.

Prior to obtaining the doctoral degree, the research student is to have participated actively in no fewer than two international academic conferences.

9. Other rules and regulations

Resources and other circumstances permitting, research students are to participate in international PhD courses or complete parts of the programme abroad.

10. Transitional provisions

The present general syllabus enters into force immediately. However, previously admitted doctoral students are entitled to complete the programme in accordance with the former syllabus for a period of 18 months.
