

**LUND**  
UNIVERSITY

Faculty of Engineering, LTH

## **General syllabus for third-cycle studies in Water Resources Engineering TEVVRF00**

The syllabus was approved by the Board of the Faculty of Engineering/LTH 24 September 2007 and most recently amended 3 February 2015 (reg. no U 2015/37).

### **1. Subject description**

Water Resources Engineering comprises hydrology and hydrodynamics broadly defined. The aim of the subject is to describe hydrological processes in nature hydrodynamically. The major research fields are urban hydrology, i. e. studies of intense precipitation including different solutions for surface runoff and flow phenomena in technical systems; river hydrology, i. e. the connections between rain-runoff-flood/drought; physical limnology, i. e. dynamic and thermal processes in lakes; coastal hydraulics, i. e. currents, waves and sediment transport on coasts; atmospheric hydrology, i. e. rain processes and hydrology/meteorology interaction; geohydrology specialising in solute transport in soils, i. e. transport of water and matter between surface and ground water; and waste management hydrology, i. e. transport of water and pollutants through and out of landfills. Research in the subject is conducted in the field and in laboratories. Mathematical modelling is used to a great extent. International projects prevail in this international research environment.

### **2. Objective of third-cycle studies at LTH**

The Board of LTH established the following objective for third-cycle studies on 15 February 2007.

The overall objective of third-cycle studies at LTH is to contribute to social development and prosperity by meeting the needs of business and industry, academia and wider society for staff with third-cycle qualifications. LTH shall primarily provide education leading to a PhD or licentiate in the fields of LTH's professional degrees. The programmes are first and foremost intended for the further training of engineers and architects. The programmes are designed to encourage personal development and the individual's unique qualities.

Third-cycle graduates from LTH shall demonstrate:

- proficiency in research theories and methods and in a critical, scientific approach
- both breadth and depth of knowledge within the subject of his or her third-cycle studies

The programmes aim to develop:

- creativity and independence with the ability to formulate advanced research issues, solve problems and plan, carry out and evaluate projects within a set time frame
- openness to change
- personal networks, both national and international
- social skills and communication skills
- teaching ability
- innovation skills, leadership and entrepreneurship

In order to enable students to achieve these skills and abilities, LTH provides:

- high-quality supervision and good conditions for study in a creative environment
- a good balance between basic and applied research, with openness to wider society
- a range of advanced third-cycle courses at both departmental and faculty level
- a good balance between courses and thesis work
- opportunities to present research findings at national and international conferences and in internationally recognised journals, or by another equivalent method which leads to wide exposure and circulation
- opportunities to spend time in international research environments for short or extended periods

### **3. Learning outcomes for third-cycle studies**

The learning outcomes for third-cycle studies are given in the Higher Education Ordinance.

#### **3.1 Licentiate**

##### **Knowledge and understanding**

For a Licentiate the third-cycle student shall:

- demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular

##### **Competence and skills**

For a Licentiate the third-cycle student shall:

- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work
- demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general
- demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity

##### **Judgement and approach**

For a Licentiate the third-cycle student shall:

- demonstrate the ability to make assessments of ethical aspects of his or her own research
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning

## 3.2 Doctor of Philosophy

### Knowledge and understanding

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate broad knowledge and systematic understanding of the research field as well as advanced and up-to-date specialised knowledge in a limited area of this field
- demonstrate familiarity with research methodology in general and the methods of the specific field of research in particular

### Competence and skills

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate the capacity for scholarly analysis and synthesis as well to review and assess new and complex phenomena, issues and situations autonomously and critically
- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake research and other qualified tasks within predetermined time frames and to review and evaluate such work
- demonstrate through a thesis the ability to make a significant contribution to the formation of knowledge through his or her own research
- demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
- demonstrate the ability to identify the need for further knowledge
- demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity

### Judgement and approach

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics
- demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used

## 4. General and specific admission requirements

A person meets the general admission requirements for third-cycle courses and study programmes if he or she:

1. has been awarded a second-cycle qualification, or
2. has satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second cycle, or
3. has acquired substantially equivalent knowledge in some other way in Sweden or abroad.

The higher education institution may permit an exemption from the general entry requirements for an individual applicant, if there are special grounds. Ordinance (2010:1064).

A person meets the specific admission requirements if he or she has

1. at least 90 credits in subjects of relevance to the field including at least 60 second-cycle credits and a second-cycle degree project of at least 30 credits in the field, or
2. a second-cycle degree in a relevant field.

Finally, the student must be judged to have the potential to complete the programme.

Exemptions from the admission requirements may be granted by the Board of LTH.

## 5. Selection

Selection for third-cycle studies is based on the student's potential to profit from such studies.

The assessment of potential in accordance with the first paragraph is made primarily on the basis of academic results from the first and second cycle. Special attention is paid to the following:

1. Knowledge and skills relevant to the thesis project and the subject of study. These may be demonstrated through documents appended to the application and at a possible interview.
2. An assessment of ability to work independently and to formulate and tackle research problems. The assessment could be made on the basis of the student's degree project and a discussion of this at a possible interview.
3. Written and oral communication skills
4. Other experience relevant to the third-cycle studies, e.g. professional experience

## 6. Degree requirements

Third-cycle studies lead to a PhD or, if the student wishes or if it has been specified in the decision on admission, to a licentiate. The student also has the right to complete a licentiate as a stage in his or her third-cycle studies, but is not obliged to do so.

The requirements for a licentiate are:

- passed courses of at least 45 credits, and
- a passed thesis of a scope corresponding to studies of at least 60 credits

The thesis and courses shall comprise at least 120 credits in total.

The requirements for a PhD are

- passed courses of at least 90 credits, and
- a passed thesis of a scope corresponding to studies of at least 150 credits

The thesis and courses shall comprise at least 240 credits in total.

### 6.1 Degrees awarded

The programme can lead to the following degrees:

*Teknologie licentiatexamen*/Licentiate in Engineering

*Teknologie doktorsexamen*/Doctor of Philosophy in Engineering

or:

*Filosofie licentiatexamen*/Licentiate of Philosophy

*Filosofie doktorsexamen*/Doctor of Philosophy

## 7. Course component

The programme is to include courses. For each course, an examiner shall be appointed at the department that delivers the course. The examiner shall draw up a written syllabus which states the course title in Swedish and English, the learning outcomes of the course, the course content and the number of credits.

The individual study plan is to include details of which courses the individual student shall or may include in his or her studies and how many credits for each course may be included in the degree. Courses taken at other faculties or higher education institutions may also be included in the study plan.

The courses can consist of taught classes but can also include independent study or laboratory or field studies.

The optional courses available at the home department include Urban Hydrology, Unsteady Flow, Waste Technology, Landfill Hydrology, International Hydrology, Statistical Hydrology, Open-Channel Flow, Lake Hydrology, Cold Climate Hydrology, Climatology, Hydrochemistry, Geohydrology, Surface Water Processes, and Field Methods in Hydrology.

Optional courses available outside the home department include Microbiology, Remote Sensing, Chaos Dynamics, Runoff Models and Snow Hydrology.

Optional courses can also be found in areas such as mathematics, mathematical statistics, biochemistry, hydrochemistry, microbiology, geology, geoengineering, palaeontology, physical geography, water and environmental engineering, systems analysis, ecology, biological limnology, urban design, energy systems and construction engineering.

## **7.1 Licentiate**

The compulsory courses are Research Methodology (7.5 credits) or Theory of Science and Ethics (4.5 credits) and Information Management and Reading Skills (3 credits), and either Hydrodynamics (7.5 credits) or Hydrology (7.5 credits).

## **7.2 Doctor of Philosophy**

The compulsory courses are Research Methodology (7.5 credits) or Theory of Science and Ethics (4.5 credits) and Information Management and Reading Skills (3 credits), and either Hydrodynamics (7.5 credits) or Hydrology (7.5 credits).

## **8. Thesis**

The programme shall include a research project documented in a licentiate or doctoral thesis.

### **8.1 Licentiate thesis**

The licentiate thesis can be either a research paper or an investigation report based on research. The thesis should have a quality that satisfies the requirements for publication in academic journals. It may consist of several studies, at least one of which must be an international journal article. The thesis is to be presented at a public seminar chaired by an external reviewer.

### **8.2 PhD thesis**

A research thesis is to be compiled and publicly defended. The thesis can be structured either as a monograph or as a compilation of internationally published or publishable articles. Depending on the extent of co-authorship, a compilation thesis should include 4–7 articles.

The thesis should have a quality that satisfies the requirements for publication in international peer-reviewed journals. The majority of the articles included in a compilation thesis must be published in international journals. Parts of a monograph thesis shall be possible to publish in journals. Prior to the thesis defence, the student shall have written articles, even if the final thesis is a monograph.

A thesis with more than one author may be considered for authors whose individual contributions can be discerned or when the thesis is clearly a result of very close cooperation. Higher requirements will be placed on a thesis produced by more than one author.

## **9. Other rules and regulations**

Each research student shall be supervised by a principal supervisor and at least one assistant supervisor. The assistant supervisors shall have the qualifications of a reader or particular expertise in the relevant research area.
