LUCAS-DAGEN 2015: OPENNESS

OPEN SOURCE, INOVATION, DATA AND RESEARCH

The objective of the annual LUCAS-day is to inspire and develop collaboration between industry and academia in the field of applied software research. This year’s theme is Openness.

The importance of Openness continues to grow in both industry and academia. Through Open Innovation, companies, institutions and even competitors work together to accelerate innovation of products and services. Open Source has long been established in the software industry and the trend has also spread to the open hardware and other industries. Other forms of Openness include crowdsourcing and crowdfunding as alternative ways to develop and finance both software and hardware. Open Data is currently a hot area, not the least for public organizations, such as municipalities, regions, and county councils that want to make data available for various private and public services.

During the LUCAS day we will hear presentations from academia, society, and industry on various forms of Openness, related opportunities and challenges and how Openness can be practically applied.

Speakers include:

• Robert Sandell, Cloud Bees: Controlling the openness - how to get your will done
• Fredrik Hugosson, Axis Communications: The challenges and possibilities around security issues when using open source
• Robert Fekete, Intel Open Source Technology Center: Community code reviews – the good, the bad and the ugly?

For the full program, see website.

MAPCI, Mobile Heights Center, Mobilvägen 10, Lund
September 22, 2015 at 9.00 to 16.30 (19)
Free of charge. Registration required. Welcome!
