General syllabus for third-cycle studies in Mechanics TEFMEF01

The syllabus was approved by the research programmes board of the Faculty of Engineering/LTH 3 November 2008 and most recently amended 12 March 2019 (reg. no U 2019/104).

1. Subject description

Mechanics is the branch of the physical sciences dealing with material bodies in rest or in movement as a result of forces. Material bodies are in Mechanics to be understood as particles, stiff or deformable bodies in the form of gases, fluids or solid bodies. The principles and methods of Mechanics are formulated axiomatically so mathematics and mathematical and numerical methods are highly significant for resolving problems within the field.

Research in Mechanics is currently specialised in the mechanics of deformable bodies and continuum mechanics. Among the specific areas addressed are breakage mechanics, fatigue, nanomechanics, dynamic instabilities, modelling of powder and granular materials, and multibody dynamics.

2. Objective of third-cycle studies at LTH

The Board of LTH established the following objective for third-cycle studies on 15 February 2007.

The overall objective of third-cycle studies at LTH is to contribute to social development and prosperity by meeting the needs of business and industry, academia and wider society for staff with third-cycle qualifications. LTH shall primarily provide education leading to a PhD or licentiate in the fields of LTH’s professional degrees. The programmes are first and foremost intended for the further training of engineers and architects. The programmes are designed to encourage personal development and the individual’s unique qualities.

Third-cycle graduates from LTH shall demonstrate:

- proficiency in research theories and methods and in a critical, scientific approach
- both breadth and depth of knowledge within the subject of his or her third-cycle studies
The programmes aim to develop:
- creativity and independence with the ability to formulate advanced research issues, solve problems and plan, carry out and evaluate projects within a set time frame
- openness to change
- personal networks, both national and international
- social skills and communication skills
- teaching ability
- innovation skills, leadership and entrepreneurship

In order to enable students to achieve these skills and abilities, LTH provides:
- high-quality supervision and good conditions for study in a creative environment
- a good balance between basic and applied research, with openness to wider society
- a range of advanced third-cycle courses at both departmental and faculty level
- a good balance between courses and thesis work
- opportunities to present research findings at national and international conferences and in internationally recognised journals, or by another equivalent method which leads to wide exposure and circulation
- opportunities to spend time in international research environments for short or extended periods

3. Learning outcomes for third-cycle studies

The learning outcomes for third-cycle studies are given in the Higher Education Ordinance.

3.1 Licentiate

Knowledge and understanding
For a Licentiate the third-cycle student shall:
- demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular

Competence and skills
For a Licentiate the third-cycle student shall:
- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work
- demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general
- demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity
Judgement and approach
For a Licentiate the third-cycle student shall:
- demonstrate the ability to make assessments of ethical aspects of his or her own research
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning

3.2 Doctor of Philosophy
Knowledge and understanding
For the degree of Doctor of Philosophy the third-cycle student shall:
- demonstrate broad knowledge and systematic understanding of the research field as well as advanced and up-to-date specialised knowledge in a limited area of this field
- demonstrate familiarity with research methodology in general and the methods of the specific field of research in particular

Competence and skills
For the degree of Doctor of Philosophy the third-cycle student shall:
- demonstrate the capacity for scholarly analysis and synthesis as well to review and assess new and complex phenomena, issues and situations autonomously and critically
- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake research and other qualified tasks within predetermined time frames and to review and evaluate such work
- demonstrate through a thesis the ability to make a significant contribution to the formation of knowledge through his or her own research
- demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
- demonstrate the ability to identify the need for further knowledge
- demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity

Judgement and approach
For the degree of Doctor of Philosophy the third-cycle student shall:
- demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics
- demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used

4. General and specific admission requirements
A person meets the general admission requirements for third-cycle courses and study programmes if he or she:
1. has been awarded a second-cycle qualification, or
2. has satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second cycle, or
3. has acquired substantially equivalent knowledge in some other way in Sweden or abroad.

The higher education institution may permit an exemption from the general entry requirements for an individual applicant, if there are special grounds. Ordinance (2010:1064).

A person meets the specific admission requirements if he or she has

1. at least 90 credits of relevance to the field, including at least 60 second-cycle credits, or
2. a second cycle degree in a relevant field

Finally, the student must be judged to have the potential to complete the programme.

Exemptions from the admission requirements may be granted by the Board of LTH.

5. Selection

Selection for third-cycle studies is based on the student’s potential to profit from such studies.

The assessment of potential in accordance with the first paragraph is made primarily on the basis of academic results from the first and second cycle. Special attention is paid to the following:

1. Knowledge and skills relevant to the thesis project and the subject of study. These may be demonstrated through documents appended to the application and at a possible interview.
2. An assessment of ability to work independently and to formulate and tackle research problems. The assessment could be made on the basis of the student’s degree project and a discussion of this at a possible interview.
3. Written and oral communication skills
4. Other experience relevant to the third-cycle studies, e.g. professional experience.

6. Degree requirements

Third-cycle studies lead to a PhD or, if the student wishes or if it has been specified in the decision on admission, to a licentiate. The student also has the right to complete a licentiate as a stage in his or her third-cycle studies, but is not obliged to do so.

The requirements for a licentiate are:

- passed courses of at least 45 credits, and
- a passed thesis of a scope corresponding to studies of at least 60 credits

The thesis and courses shall comprise at least 120 credits in total.
The requirements for a PhD are
- passed courses of at least 90 credits, and
- a passed thesis of a scope corresponding to studies of at least 120 credits

The thesis and courses shall comprise at least 240 credits in total.

6.1 Degrees awarded
The programme can lead to the following degrees:

Teknologie licentiatexamen/Licentiate in Engineering
Teknologie doktorsexamen/Doctor of Philosophy in Engineering
or:
Filosofie licentiatexamen/Licentiate of Philosophy
Filosofie doktorsexamen/Doctor of Philosophy

7. Course component
The programme is to include courses. For each course, an examiner shall be appointed at the department that delivers the course. The examiner shall draw up a written syllabus which states the course title in Swedish and English, the learning outcomes of the course, the course content and the number of credits.

The individual study plan is to include details of which courses the individual student shall or may include in his or her studies and how many credits for each course may be included in the degree. Courses taken at other faculties or higher education institutions may also be included in the study plan.

It is compulsory to participate in and pass the course Introductory Workshop for Newly Admitted Doctoral Students at LTH (Introduktionskurs för nyantagna doktorander vid LTH) GEM056F or the equivalent.

The following guidelines apply to the design of the course component of the programme.

For a degree of Licentiate or Doctor, the third-cycle student is to include courses in subjects such as mechanics, mathematics and numerical methods. The majority of the courses are to be selected from within these areas, while taking into account the relevance to the project and the study programme as a whole.

8. Thesis
The programme shall include a research project documented in a licentiate and/or doctoral thesis.

There is a difference in the contents of licentiate and doctoral theses in so far as the former is to demonstrate thorough knowledge of the research front whereas the latter is to contribute new ideas to the development of research.

In order to be introduced to the research field, the students are to participate in international conferences. Subsequently, they are also to present individual research at international conferences as it will confirm their ability to present their ideas and findings to a qualified audience. It will also give the students opportunities to establish a personal network of contacts.
The students are also to participate in the seminar activities at the department. Furthermore, it is important that the students are enabled to cultivate contacts with industry through visits and collaboration.

8.1 Licentiate thesis
The licentiate thesis is usually a compilation thesis but can also be designed as a monograph. It is to address the chosen research area as well as problems of principle and specific aspects of the subject. It shall be possible for the reader to form an understanding and view of the research front within the field through the thesis. Furthermore, the licentiate thesis often includes drafts and ideas for a future PhD thesis.

The thesis is to be presented at a public seminar moderated by an informal reviewer. The thesis shall be available for scrutiny at the time of the seminar. The informal reviewer is not to be a member of departmental staff.

8.2 PhD thesis
The PhD thesis is to be designed as a compilation thesis including papers published or forthcoming in international peer-reviewed journals. The thesis is to consist of 3–4 papers of this kind.

In exceptional cases, the thesis can be designed as a monograph addressing the chosen field.

Overall, the PhD thesis is to demonstrate that the author is qualified to contribute to the development of research.

9. Other rules and regulations
The students are usually to participate in undergraduate teaching and other departmental duties as part of their development.

10. Transitional provision
For doctoral students with an admission date of 1 January 2019 or later, it is compulsory to participate in and pass the course Introductory Workshop for Newly Admitted Doctoral Students at LTH (Introduktionskurs för nyantagna doktorander vid LTH) GEM056F or the equivalent in order to fulfil the requirements for the degree.
