

International Office, LTH

## **General syllabus for third-cycle studies in Structural Mechanics TEVSMF00**

The syllabus was approved by the Board of the Faculty of Engineering/LTH 24 September 2007 and most recently amended 8 September 2020 (reg. no U 2020/679).

### **1. Subject description**

The disciplinary core of the subject is structural mechanics based on the principles and idealisations of continuum mechanics. The subject deals with the methods and principles of calculating deformations and tensions for different types of construction, material and load.

Structural mechanics is a core subject of construction engineering but there are applications in a number of different fields associated with construction.

A key focus of research is methods and strategies of calculation specialising in computer simulations of applied mechanics. The ambition is to spread knowledge of advanced calculation methods in projects in close cooperation with industry.

### **2. Objective of third-cycle studies at LTH**

The Board of LTH established the following objective for third-cycle studies on 15 February 2007.

The overall objective of third-cycle studies at LTH is to contribute to social development and prosperity by meeting the needs of business

and industry, academia and wider society for staff with third-cycle qualifications. LTH shall primarily provide education leading to a PhD or licentiate in the fields of LTH's professional degrees. The programmes are first and foremost intended for the further training of engineers and architects. The programmes are designed to encourage personal development and the individual's unique qualities.

Third-cycle graduates from LTH shall demonstrate:

- proficiency in research theories and methods and in a critical, scientific approach
- both breadth and depth of knowledge within the subject of his or her third-cycle studies

The programmes aim to develop:

- creativity and independence with the ability to formulate advanced research issues, solve problems and plan, carry out and evaluate projects within a set time frame
- openness to change
- personal networks, both national and international
- social skills and communication skills
- teaching ability
- innovation skills, leadership and entrepreneurship

In order to enable students to achieve these skills and abilities, LTH provides:

- high-quality supervision and good conditions for study in a creative environment
- a good balance between basic and applied research, with openness to wider society
- a range of advanced third-cycle courses at both departmental and faculty level
- a good balance between courses and thesis work
- opportunities to present research findings at national and international conferences and in internationally recognised journals, or by another equivalent method which leads to wide exposure and circulation

- opportunities to spend time in international research environments for short or extended periods

### 3. Learning outcomes for third-cycle studies

The learning outcomes for third-cycle studies are given in the Higher Education Ordinance.

#### 3.1 Licentiate

##### *Knowledge and understanding*

For a Licentiate the third-cycle student shall:

- demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular

##### *Competence and skills*

For a Licentiate the third-cycle student shall:

- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work
- demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general
- demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity.

##### *Judgement and approach*

For a Licentiate the third-cycle student shall:

- demonstrate the ability to make assessments of ethical aspects of his or her own research
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning

### **3.2 Doctor of Philosophy**

#### ***Knowledge and understanding***

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate broad knowledge and systematic understanding of the research field as well as advanced and up-to-date specialised knowledge in a limited area of this field
- demonstrate familiarity with research methodology in general and the methods of the specific field of research in particular

#### ***Competence and skills***

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate the capacity for scholarly analysis and synthesis as well to review and assess new and complex phenomena, issues and situations autonomously and critically
- demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake research and other qualified tasks within predetermined time frames and to review and evaluate such work
- demonstrate through a thesis the ability to make a significant contribution to the formation of knowledge through his or her own research
- demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general

- demonstrate the ability to identify the need for further knowledge
- demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity

### ***Judgement and approach***

For the degree of Doctor of Philosophy the third-cycle student shall:

- demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics
- demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used

### ***Midway Review***

A midway review, with the aim of reviewing the doctoral student's education in relation to the learning outcomes for the degree in the Higher Education Ordinance, is to be implemented at least once during the doctoral student's programme for all doctoral students whose education is to conclude with a doctoral degree.

## **4. General and specific admission requirements**

### **4.1 General admission requirements**

A person meets the general admission requirements for third-cycle courses and study programmes if he or she:

- has been awarded a second-cycle qualification, or
- has satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second cycle, or
- has acquired substantially equivalent knowledge in some other way in Sweden or abroad.

The higher education institution may permit an exemption from the general entry requirements for an individual applicant, if there are special grounds. Ordinance (2010:1064).

## 4.2 Specific admission requirements

A person meets the specific admission requirements if he or she has

- at least 90 credits in subjects of relevance to the field including at least 75 second-cycle credits and a second-cycle degree project of at least 30 credits in the field, or
- a second-cycle degree in a relevant field.

Finally, the student must be judged to have the potential to complete the programme.

Exemptions from the admission requirements may be granted by the Board of LTH.

## 5. Selection

Selection for third-cycle studies is based on the student's potential to profit from such studies.

The assessment of potential in accordance with the first paragraph is made primarily on the basis of academic results from the first and second cycle. Special attention is paid to the following:

- Knowledge and skills relevant to the thesis project and the subject of study. These may be demonstrated through documents appended to the application and at a possible interview.
- An assessment of ability to work independently and to formulate and tackle research problems. The assessment could be made on the basis of the student's degree project and a discussion of this at a possible interview.
- Written and oral communication skills
- Other experience relevant to the third-cycle studies, e.g. professional experience.

## 6. Degree requirements

Third-cycle studies lead to a PhD or, if the student wishes or if it has been specified in the decision on admission, to a licentiate. The

student also has the right to complete a licentiate as a stage in his or her third-cycle studies, but is not obliged to do so.

The requirements for a licentiate are:

- passed courses of at least 45 credits, and
- a passed thesis of a scope corresponding to studies of at least 60 credits

The thesis and courses shall comprise at least 120 credits in total.

The requirements for a PhD are

- passed courses of at least 75 credits, and
- a passed thesis of a scope corresponding to studies of at least 150 credits

The thesis and courses shall comprise at least 240 credits in total.

## **6.1 Degrees awarded**

The programme can lead to the following degrees:

- *Teknologie licentiatexamen*/Licentiate in Engineering
- *Teknologie doktorsexamen*/Doctor of Philosophy in Engineering

or:

- *Filosofie licentiatexamen*/Licentiate of Philosophy
- *Filosofie doktorsexamen*/Doctor of Philosophy

## **7. Course component**

The programme is to include courses. For each course, an examiner shall be appointed at the department that delivers the course. The examiner shall draw up a written syllabus which states the course title in Swedish and English, the learning outcomes of the course, the course content and the number of credits.

The individual study plan is to include details of which courses the individual student shall or may include in his or her studies and how

many credits for each course may be included in the degree. Courses taken at other faculties or higher education institutions may also be included in the study plan.

It is compulsory to participate in and pass the course Introductory Workshop for Newly Admitted Doctoral Students at LTH (*Introduktionskurs för nyantagna doktorander vid LTH*) GEM056F or the equivalent.

It is also compulsory to attend and earn a Pass grade on the course Research Ethics, GEM090F.

The aim of the course component is to provide students with a broad scientific foundation for key aspects of the subject. The course component is to be adapted to the individual student's prior knowledge, interests and research specialisation. The majority of the courses are to belong to the four areas listed below. For the remaining credits, courses in subjects such as mathematics, mathematical statistics, programming, experimental methods, academic writing and presentation techniques are recommended.

- I. Research methods, research ethics and the theory of science
- II. Continuum and material mechanics
- III. Structural mechanics including structural dynamics
- IV. Numerical modelling and simulation techniques, especially the finite element method including applications of structural mechanics

## 8. Thesis

The programme shall include a research project documented in a licentiate or doctoral thesis.

There is a difference in content in the two types of thesis. The licentiate thesis is to demonstrate specialised knowledge of the research front whereas the doctoral thesis is also to push research forward through new ideas.

Doctoral students should participate in international conferences to gain an introduction to the research field. Later on, they should present their own research at conferences as this will reinforce their ability to present their ideas and findings to an expert audience. In addition, they will be able to create a personal network of contacts. The doctoral student shall also participate in the seminar activities at the department.

The doctoral student is to have the opportunity to establish contact with industry through visits and different types of cooperation

### **8.1 Licentiate thesis**

The licentiate thesis is usually structured as a compilation of articles but can also have the form of a monograph. The thesis is to address the selected research area, problems of principle and specific aspects of the subject. It is to provide the reader with an understanding and view of the research front of the selected area. The licentiate thesis often includes drafts and ideas for continued research to obtain a PhD.

The thesis is to be reviewed at a public seminar chaired by an informal reviewer. The thesis is to be available at the time of the seminar. The informal reviewer is appointed by the department.

### **8.2 PhD thesis**

The PhD thesis is to be structured as a compilation of research articles published or forthcoming in international peer-reviewed journals. The thesis is to include 3–4 articles of this type.

In exceptional cases, the PhD thesis can be structured as a monograph addressing the selected field of research.

In brief summary, the PhD thesis is to demonstrate that the author has the ability to contribute to research development.

## 9. Other rules and regulations

As a part of their development, doctoral students are usually to participate in undergraduate education and other departmental duties.

## 10. Transitional provisions

This study plan takes effect immediately. PhD students admitted earlier can choose to complete the programme with the present syllabus but are also entitled to continue with their studies according to their existing study plan. (reg. no U 2014/717)

For doctoral students with an admission date of 1 January 2019 or later, it is compulsory to participate in and pass the course Introductory Workshop for Newly Admitted Doctoral Students at LTH (*Introduktionskurs för nyantagna doktorander vid LTH*) GEM056F or the equivalent in order to fulfil the requirements for the degree.

For doctoral students admitted on or after 1 January 2021, it is compulsory to attend and earn a Pass grade on the course Research Ethics, GEM090F.

The midway review is compulsory for doctoral students admitted on or after 1 January 2019.
