“The capacity to manage risk, and with it the appetite to take risk, and make forward-looking choices, are the key elements of the energy that drives the economic system forward.”

(Bernstein, 1996, “Against the Gods – the remarkable story of risk”, p. 3)

“The survey polled some 600 finance executives in large organizations around the world. When asked to identify the top risk that affected their company’s primary revenue driver, 25 percent of the respondents from North American companies and 19 percent of those based overseas – the largest proportion in both cases – choose supply-chain exposures.”
